Assignment 1: Grade Average Calculator

Intro to Programming in Python

Write a Python program in a file named grades.py that works out a student's average test score and letter grade. Complete these steps:

- [ ] Create a list named scores that holds five test scores.
- [ ] Define a function named average(scores) that returns their mean.
- [ ] Define a function named letter_grade(avg) that returns A, B, C, D, or F.
- [ ] Print the average rounded to one decimal place.
- [ ] Print the letter grade in a message like: Your grade is B.

Grading scale: A is 90 and up, B is 80 to 89, C is 70 to 79, D is 60 to 69, and F is below 60.
